

Zelená Vinice

FRAMER WEBSITE TEMPLATE

Start here

Version 11 · Quick start

Your site is delivered ready. One click and it is in your Framer account — there is no code to copy.

Open your link

Your link:

PASTE YOUR FRAMER DUPLICATE LINK HERE

1. Open the link while signed in to Framer.
2. Framer asks whether you want to duplicate the project. Confirm.
3. The project appears in your own account, with the component already placed on the canvas and every section filled in.
4. Select the component and start editing in the panel on the right.

Nothing to paste, nothing to install, no code file to create. What you get is the finished site, which you then rewrite into your own restaurant from the panel on the right.

This link is for you. It lets anyone who has it copy the whole project, so please do not post it publicly.

If you already have a Framer project

You only need this if you want the template inside a project you have already built, instead of the ready-made one your link opens. Otherwise skip it.

1. Open your Framer project.
2. In the Assets panel, click **+ → Code File** and name it `ZelenaViniceSite`.
3. Delete the placeholder code, paste in the whole contents of `ZelenaViniceSite.tsx`, and save.
4. Drag the component from Assets onto your canvas.
5. Set its width to **Fill** and height to **Fit**.

It is the same component either way. The link is simply the route that asks nothing of you.

One thing to know before you start

Framer's panel commits some multi-line fields the moment you press Enter, so opening hours and addresses end up stubbornly on one line.

Type a `|` where you want the break:

Mon–Thu 11:00–23:00 | Fri–Sat 11:00–24:00 | Sun 11:00–22:00

It works in the address, both sets of opening hours, the hero headline, and the About text, where it starts a new paragraph. Full details in section 4 of the guide.

Not using Framer?

`zelena-vinice-mockup.html` is the same site as a single standalone file. Rename it to `index.html`, upload it to any hosting, and it works — no build step, no account, nothing to install.

Full instructions for every section are in **Full guide.pdf**.
